

Manufacturing Manager

Proteomics International is an ASX listed medical technology company at the forefront of predictive diagnostics and bio-analytical services. The company's mission is to improve the quality of lives by the creation and application of innovative tools that enable the improved treatment of disease.

Proteomics International's business model is centred on the commercialisation of its flagship immunoassay diagnostic product - the **PromarkerD** test for predicting diabetic kidney disease. The company continues to expand its diagnostic portfolio and target new diagnostic tests for chronic diseases with significant unmet need.

About the role

Manage the delivery of a diagnostic kit to partners on a global basis manufactured under ISO 13485 quality standard. This role is to drive performance in a customer-focused fashion for on-time delivery of exceptional quality kits and reagents. The person in this role will be experienced in coordinating 3rd party manufacturing and distribution partners, driving a culture of continuous improvement and measuring performance against KPI.

This is an exciting opportunity for someone aiming to deliver real, lasting change and sustainable business benefits.

Key Responsibilities

- Delivering on-time manufacture of products for global partners, delivered to exceed customer and quality needs.
- Manage the supply chain and logistics for IVD reagent manufacturing and assembly of kits with 3rd party contractors under the current ISO 13485 standard.
- Development and reporting KPI metrics to monitor manufacture and portfolio progression, including performance, budget and time criteria, delivering success whilst minimising cost and time and maintaining quality.
- Oversee efficient development and addition of new products to the portfolio.
- Deliver an effective stakeholder communication strategy, including engagement with the leadership team to report on progress, identifying constraints and relaying mitigation strategies.
- Champion continuous improvement and engage with Operational Excellence, Regulatory and QA teams to deliver effective solutions.

About You

- You will have several years experience of manufacture, with knowledge of ISO 13485 standard and IVD Regulatory requirement.
- You will have previously demonstrated excellent people management skills and have experience dealing and managing 3rd party vendors.
- You will be a confident communicator, able to understand IVD reagent production (including antibodies, standards, quality control etc.) and kit assembly processes, and translate these to manufacturing and supply chain requirements.
- Continuous improvement approaches to optimise performance.
- Use of KPI and critical path measurements will be second nature.
- Skills with diverse stakeholder management and maintaining engagement and communications across other internal business groups are expected.
- An understanding of licensing / trade secrets is advantageous.

Opportunities and Benefits

- Supportive work environment
- Competitive salary (commensurate with experience)
- Career growth and development opportunities
- State-of-the-art facilities (Perth's QEII Medical Campus)

The positions are being offered for full time. The applicant must have the right to work in Australia.
